UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF LOUISIANA

GRANT PARISH SCHOOL BOARD, *Plaintiff*,	CIVIL ACTION NO.
v.	JUDGE:
MONSANTO COMPANY, SOLUTIA INC., and PHARMACIA CORPORATION, *Defendants*	MAGISTRATE JUDGE:

PLAINTIFF'S ORIGINAL COMPLAINT

I. INTRODUCTION

1. The Grant Parish School Board (the "Board") operates eight public schools in Grant Parish, Louisiana. The Board has detected toxic chemical compounds known as Polychlorinated Biphenyls (PCBs) in at least one of its schools, Pollock Elementary School.

2. PCBs are man-made organic chemical compounds that were used in many industrial and commercial applications in the United States. Among other uses, PCBs were incorporated into building products including electrical equipment, fluorescent lighting ballasts, paints, sealants, and caulks that were used in the construction of commercial and school buildings.

3. PCBs cause a variety of adverse health effects. PCB exposure is associated with cancer as well as serious non-cancer health effects, including effects on the immune system, reproductive system, nervous system, endocrine system and other health effects.

4. PCBs easily escape into the atmosphere when they are produced and through the normal, intended uses of products that contain PCB compounds. To stem the contamination and to prevent health risks associated with exposure to PCBs, Congress enacted the Toxic Substances Control Act ("TSCA"), which banned the manufacture and most uses of PCBs as of January 1, 1979.
5. The Board seeks damages for the costs of investigating, removing toxic PCB compounds, and remediating all PCB contamination from its school buildings and properties.

II. PARTIES

6. Plaintiff, the Grant Parish School Board operates eight public schools in Grant Parish, Louisiana, including the contaminated school, Pollock Elementary School, which is located at 4001 Highway 8, Pollock, Louisiana 71467.
7. In Louisiana, a school board is a body corporate with the power to sue and be sued as provided by La. Rev. Stat. Ann. § 17:51. City and parish school boards are authorized to construct, maintain, and repair school buildings as well as the furniture, equipment, and supplies for those buildings. Pursuant to La. R.S. 17:81, school boards have the power to recover for any damage to property in their charge.
8. The official domicile of the Grant Parish School Board is the School Board Central Office located at 410 Sibley Street, Benton, Louisiana, 71006.
9. Defendant Monsanto Company ("Monsanto") is a Delaware corporation with its principal place of business in St. Louis, Missouri.
10. Defendant Solutia Inc. ("Solutia") is a Delaware corporation with its headquarters and principal place of business in St. Louis, Missouri.

11. Defendant Pharmacia LLC (formerly known as "Pharmacia Corporation" and successor to Old Monsanto) is a Delaware LLC with its principal place of business in Peapack, New Jersey. Pharmacia is now a wholly-owned subsidiary of Pfizer, Inc.

12. The original Monsanto Company ("Old Monsanto") operated an agricultural products business, a pharmaceuticals and nutrition business, and a chemical products business. Old Monsanto began manufacturing PCBs in the 1930s and continued to manufacture commercial PCBs until the late 1970s.

13. Through a series of transactions beginning in approximately 1997, Old Monsanto's businesses were spun off to form three separate corporations. The corporation now known as Monsanto operates Old Monsanto's agricultural products business. Old Monsanto's chemical products business is now operated by Solutia. Old Monsanto's pharmaceuticals business is now operated by Pharmacia.

14. Solutia was organized by Old Monsanto to own and operate its chemical manufacturing business. Solutia assumed the operations, assets, and liabilities of Old Monsanto's chemicals business.[1]

15. Although Solutia assumed and agreed to indemnify Pharmacia (then known as Monsanto Company) for certain liabilities related to the chemicals business, Defendants have entered into agreements to share or apportion liabilities, and/or to indemnify one or more entity, for claims arising from Old Monsanto's chemical business --- including the manufacture and sale of PCBs.[2]

---

[1] See MONSANTO COMPANY'S ANSWER TO THE COMPLAINT AND JURY DEMAND, *Town of Lexington v. Pharmacia Corp., Solutia, Inc., and Monsanto Company*, C.A. No. 12-CV-11645, D. Mass. (October 8, 2013); see also Relationships Among Monsanto Company, Pharmacia Corporation, Pfizer Inc., and Solutia Inc., http://www.monsanto.com/whoweare/pages/monsanto-relationships-pfizer-solutia.aspx (last accessed February 20, 2014).

[2] *See id.*

16. In 2003, Solutia filed a voluntary petition for reorganization under Chapter 11 of the U.S. Bankruptcy Code. Solutia's reorganization was completed in 2008. In connection with Solutia's Plan of Reorganization, Solutia, Pharmacia and New Monsanto entered into several agreements under which Monsanto continues to manage and assume financial responsibility for certain tort litigation and environmental remediation related to the chemicals business.[3]

17. Monsanto, Solutia, and Pharmacia are collectively referred to in this Complaint as "Defendants."

III. JURISDICTION AND VENUE

18. This Court has jurisdiction pursuant to 28 U.S.C. §1332 because complete diversity exists between Plaintiff and Defendants. Plaintiff is a citizen of Louisiana, but no Defendant is a citizen of Louisiana. Monsanto is a Delaware corporation with its principal place of business in St. Louis, Missouri. Solutia is a Delaware corporation with its principal place of business in St. Louis, Missouri. Pharmacia is a Delaware limited liability company with its principal place of business in Peapack, New Jersey.

19. Venue is appropriate in this judicial district pursuant to 28 U.S.C. section 1391(a) because a substantial part of the property that is the subject of the action is situated in this judicial district.

IV. FACTUAL ALLEGATIONS

A. Monsanto Manufactured PCBs for Use in the United States until the 1979 Ban.

20. Polychlorinated biphenyl, or "PCB," is a molecule comprised of chlorine atoms attached to a double carbon-hydrogen ring (a "biphenyl" ring). A "PCB congener" is any single,

[3] *See* Monsanto's Form 8-K (March 24, 2008), and Form 10-Q (June 27, 2008), available at http://www.monsanto.com/investors/pages/sec-filings.aspx (last accessed February 20, 2014).

unique chemical compound in the PCB category. Over two hundred congeners have been identified.[4]

21. PCBs were generally manufactured as mixtures of congeners. These were both intentionally produced as commercial products, and incidentally produced as byproducts of other manufacturing processes. From approximately 1935 to 1979, Monsanto Company was the only manufacturer in the United States that intentionally produced PCBs for commercial use.[5] The most common trade name for PCBs in the United States was "Aroclor," which was trademarked by Old Monsanto.

22. Before 1979, Monsanto's commercially-produced PCBs were used in a wide range of industrial applications in the United States. Products containing PCBs were widely used in the construction and renovation of buildings throughout the United States.

23. Some PCB-containing products were used in applications that enclosed the PCBs completely within the equipment such as transformers, motor start capacitors, and lighting ballasts. These are generally known as "totally enclosed" uses.

24. Other PCB-containing products were used in applications in which the PCBs were not enclosed --- *e.g.*, caulks, paints, and sealants. These are known as "non-totally enclosed" or "open" uses because no physical barrier prevents PCBs from direct contact with the surrounding environment.

25. Between approximately 1950 and 1979, PCBs were widely and foreseeably used in the construction and renovation of commercial buildings and schools. Accordingly, PCBs

[4] Table of PCB Congeners, available at http://www.epa.gov/epawaste/hazard/tsd/pcbs/pubs/congeners.htm (last accessed February 20, 2014).

[5] *See* 116 Cong. Record 11695, 91st Congress, (April 14, 1970) ("Insofar as the Monsanto Co., the sole manufacturer of PCB's is concerned . . . ."); 121 Cong. Record 33879, 94th Congress, (October 23, 1975) ("The sole U.S. producer, Monsanto Co. . . . ."). *See also* MONS 058730-05875, at 058733 (identifying other producers as "all ex-USA."), attached as Exhibit A.

are likely to be present in materials including caulk, fluorescent light ballasts, and other materials in a school built or renovated during this period.

26. In response to widespread environmental contamination, Congress enacted the Toxic Substances Control Act ("TSCA"), which banned the manufacture and most uses of PCBs as of January 1, 1979.

27. As used in this Complaint, the terms "PCB," "PCBs," "PCB-containing products," and "PCB products" refer to products containing polychlorinated biphenyl congener(s) manufactured for placement into trade or commerce, including any product that forms a component part of or that is subsequently incorporated into another product.

B. PCB-Containing Materials Cause Contamination and Property Damage.

28. PCBs easily migrate from non-totally enclosed building materials (such as caulk) into surrounding materials such as masonry, wood, drywall, and soil, thereby contaminating and causing damage to those surrounding materials. PCBs can also escape from totally-enclosed materials (such as light ballasts) and similarly contaminate and damage surrounding materials.

29. The Environmental Protection Agency ("EPA") conducted research of PCBs in school buildings and confirmed that emissions from caulk and fluorescent light ballasts cause elevated PCBs in indoor air.

30. EPA concluded that some building materials (*e.g.*, paint and masonry walls) and indoor dust can absorb PCB emissions and become potential secondary sources of contamination that begin emitting PCBs on their own.

C. PCB Exposure and Toxicity

31. PCBs can enter the human both through ingestion, inhalation, and dermal contact.

32. Children, teachers, and employees who work in school buildings may inhale PCBs that are emitted into the air from caulk, paint, light ballasts, and other secondary sources. They may also ingest PCBs that are emitted into air and settle onto surfaces that come into contact with food or drinks. And they may absorb PCBs from physical contact with PCB-containing materials, secondary sources, or surfaces that have become contaminated by air or dust.

33. Any exposure is a concern to a reasonable school board because PCBs are associated with serious health risks.

34. EPA has determined that Monsanto's PCBs are probable human carcinogens. In 1996, EPA reassessed PCB carcinogenicity, based on data related to Aroclors 1016, 1242, 1254, and 1260.[6] EPA's cancer reassessment was peer reviewed by 15 experts on PCBs, including scientists from government, academia and industry, all of whom agreed that PCBs are probable human carcinogens.

35. In addition, EPA concluded that PCBs are associated with serious non-cancer health effects. From extensive studies of animals and primates using environmentally relevant doses, EPA has found evidence that PCBs exert significant toxic effects, including effects on the immune system, the reproductive system, the nervous system, and the endocrine system.

36. PCBs affect the immune system by causing a significant decrease in the size of the thymus gland, lowered immune response, and decreased resistance to viruses and other infections. The animal studies were not able to identify a level of PCB exposure that did not affect the immune system. Human studies confirmed immune system suppression.

[6] EPA, "PCBs: Cancer Dose-Response Assessment and Application to Environmental Mixtures" EPA/600/P-96/001F (September 1996), available at http://www.epa.gov/epawaste/hazard/tsd/pcbs/pubs/pcb.pdf (last accessed May 5, 2014).

37. Studies of reproductive effects in human populations exposed to PCBs show decreased birth weight and a significant decrease in gestational age with increasing exposures to PCBs. Animal studies have shown that PCB exposures reduce birth weight, conception rates, live birth rates, and reduced sperm counts.

38. Human and animal studies confirm that PCB exposure causes persistent and significant deficits in neurological development, affecting visual recognition, short-term memory, and learning. Some of these studies were conducted using the types of PCBs most commonly found in human breast milk.

39. PCBs may also disrupt the normal function of the endocrine system. PCBs have been shown to affect thyroid hormone levels in both animals and humans. In animals, decreased thyroid hormone levels have resulted in developmental deficits, including deficits in hearing. PCB exposures have also been associated with changes in thyroid hormone levels in infants in studies conducted in the Netherlands and Japan.

40. PCBs have been associated with other health effects including elevated blood pressure, serum triglyceride, and serum cholesterol in humans; dermal and ocular effects in monkeys and humans; and liver toxicity in rodents.

41. Children may be affected to a greater extent than adults. The Agency for Toxic Substances and Disease Registry explained: "Younger children may be particularly vulnerable to PCBs because, compared to adults, they are growing more rapidly and generally have lower and distinct profiles of biotransformation enzymes, as well as much smaller fat deposits for sequestering the lipophilic PCBs."[7]

[7] Agency for Toxic Substances and Disease Registry, Toxicological Profile for Polychlorinated Biphenyls (PCBs), (November 2000), at 405, available at www.atsdr.cdc.gov (last accessed May 1, 2014).

D. Monsanto's Knowledge of PCB Toxicity

42. Monsanto's internal documents show that Monsanto knew that PCBs were toxic as early as the 1930s.

43. An October 11, 1937 memorandum advises that "Experimental work in animals shows that prolonged exposure to Aroclor vapors evolved at high temperatures or by repeated oral ingestion will lead to systemic toxic effects. Repeated bodily contact with the liquid Aroclors may lead to an acne-form skin eruption."[8]

44. A September 20, 1955 memo from Emmet Kelly set out Monsanto's position with respect to PCB toxicity: "We know Aroclors are toxic but the actual limit has not been precisely defined. It does not make too much difference, it seems to me, because our main worry is what will happen if an individual develops [*sic*] any type of liver disease and gives a history of Aroclor exposure. I am sure the juries would not pay a great deal of attention to [maximum allowable concentrates]."[9]

45. On November 14, 1955, Monsanto's Medical Department provided an opinion that workers should not be allowed to eat lunch in the Aroclor department:

> It has long been the opinion of the Medical Department that eating in process departments is a potentially hazardous procedure that could lead to serious difficulties. While the Aroclors are not particularly hazardous from our own experience, this is a difficult problem to define because early literature work claimed that chlorinated biphenyls were quite toxic materials by ingestion or inhalation.[10]

46. On January 21, 1957, Emmet Kelly reported that after conducting its own tests, the U.S. Navy decided against using Monsanto's Aroclors: "No matter how we discussed the

[8] MONS 061332, attached as Exhibit B.
[9] MONS 095196-7, attached as Exhibit C.
[10] Monsanto Chemical Company, Memorandum to H.B. Patrick, November 14, 1955 (no Bates number), attached as Exhibit D.

situation, it was impossible to change their thinking that Pydraul 150 is just too toxic for use in a submarine."[11]

47. On March 6, 1969, Monsanto employee W. M. Richard wrote a memorandum discussing a recent article that criticized PCBs as a "toxic substance" and "uncontrollable pollutant."[12] Richard explained that Monsanto could take steps to reduce PCB releases from its own plants but cautioned, "It will be still more difficult to control other end uses such as cutting oils, adhesives, plastics, and NCR paper. In this applications exposure to consumers is greater and the disposal problem becomes complex."

48. On September 9, 1969, Monsanto employee W.R. Richard wrote an interoffice memo titled "Defense of Aroclor."[13] He advised that the company could not defend itself against all criticism: "We can't defend vs. everything. Some animals or fish or insects will be harmed. Aroclor degradation rate will be slow. Tough to defend against. Higher chlorination compounds will be worse [than] lower chlorine compounds. Therefore we will have to restrict uses and clean-up as much as we can, starting immediately."[14]

49. On January 29, 1970, Elmer Wheeler of the Medical Department, circulated laboratory reports discussing results of animal studies. He noted: "Our interpretation is that the PCB's are exhibiting a greater degree of toxicity in this chronic study than we had anticipated. Secondly, although there are variations depending on species of animals, the PCB's are about the same as DDT in mammals."[15]

50. Monsanto expressed a desire to keep profiting from PCBs despite the environmental havoc in a PCB Presentation to Corporate Development Committee. The report suggests

[11] MONS 095640, attached as Exhibit E.
[12] MONS 096509-096511, attached as Exhibit F.
[13] DSW 014256-014263, attached as Exhibit G.
[14] *Id.*
[15] MONS 098480, attached as Exhibit H.

possible reactions to the contamination issue. It considered that doing nothing was "unacceptable from a legal, moral, and customer public relations and company policy viewpoint." But the option of going out of the Aroclor business was also considered unacceptable: "there is too much customer/market need and selfishly too much Monsanto profit to go out."[16]

51. The Aroclor Ad Hoc Committee held its first meeting on September 5, 1969. The committee's objectives were to continue sales and profits of Aroclors in light of the fact that PCB "may be a global contaminant."[17] The meeting minutes acknowledge that PCB-containing products rapidly contaminate the environment: "In one application alone (highway paints), one million lbs/year are used. Through abrasion and leaching we can assume that nearly all of this Aroclor winds up in the environment."[18]

52. A month later, on October 2, 1969, the Committee reported that it could not protect the environment from Aroclors as "global" contaminants but could protect the manufacture and sale of Aroclors:

> There is little probability that any action that can be taken will prevent the growing incrimination of specific polychlorinated biphenyls (the higher chlorinated – e.g. Aroclors 1254 and 1260) as nearly global environmental contaminants leading to contamination of human food (particularly fish), the killing of some marine species (shrimp), and the possible extinction of several species of fish eating birds.
> Secondly, the committee believes that there is no practical course of action that can so effectively police the uses of these products as to prevent environmental contamination. There are, however a number of actions which must be undertaken to prolong the manufacture, sale and use of these particular Aroclors as well as to protect the continued use of other members of the Aroclor series.[19]

[16] Ex. A at 058737.
[17] MONS 030483-030486, attached as Exhibit I.
[18] *Id.* at 030485.
[19] DSW 014612-014624, at 014615, attached as Exhibit J.

53. An interoffice memorandum circulated on February 16, 1970 provided talking points for discussions with customers in response to Monsanto's decision to eliminate Aroclors 1254 and 1260: "We (your customer and Monsanto) are not interested in using a product which may present a problem to our environment." Nevertheless, the memo acknowledges that Monsanto "can't afford to lose one dollar of business." To that end, it says, "We want to avoid any situation where a customer wants to return fluid. . . . We would prefer that the customer use up his current inventory and purchase [new products] when available. He will then top off with the new fluid and eventually all Aroclor 1254 and Aroclor 1260 will be out of his system. We don't want to take fluid back." [20]

54. In 1970, the year after Monsanto formed the "ad hoc" committee, PCB production in the United States peaked at 85 million pounds.

E. Legal and Regulatory Standards Applicable to PCBs

55. Congress enacted the Toxic Substances Control Act ("TSCA"), which banned the manufacture and most uses of PCBs as of January 1, 1979.

56. More than thirty years passed before EPA announced that schools may have been built with PCB-containing materials. In a press release issued on September 25, 2009, EPA advised that although PCBs were banned by 1979, they remained in place in buildings that were constructed before the ban.[21]

[20] MONS 100123-100124, attached as Exhibit K.

[21] Press Release, *EPA Announces Guidance to Communities on PCBs in Caulk of Buildings Constructed or Renovated Between 1950 and 1978* (September 25, 2009), available at http://yosemite.epa.gov/opa/admpress.nsf/e51aa292bac25b0b85257359003d925f/28c8384eea0e67ed8525763c0059342f!OpenDocument&Highlight=0,PCB (last accessed February 24, 2014).

57. On December 12, 2013, EPA issued a press release advising that PCB-containing fluorescent light ballasts that were installed prior to the ban may still be in use in schools and may leak PCBs.[22]

58. EPA has not issued any information regarding possible PCB contamination in schools in Louisiana.

59. The Louisiana Department of Environmental Quality has not issued any information regarding possible PCB contamination in schools in Louisiana.

F. Plaintiff's Schools are Contaminated with PCBs.

60. Plaintiff operates eight public schools in Grant Parish, Louisiana. Plaintiff has detected PCBs in at least one of its schools, Pollock Elementary School, which was built or renovated between 1950 and 1978. In June 2014, dangerous levels of PCBs were detected at Pollock Elementary School, necessitating removal and remediation.

FIRST CAUSE OF ACTION

DEFECTIVE DESIGN UNDER LOUISIANA PRODUCTS LIABILITY ACT (La. R.S. § 9:2800.56)

61. Plaintiff realleges and reaffirms each and every allegation set forth in all preceding paragraphs as if fully restated in this cause of action.

62. Monsanto was a manufacturer of PCBs and PCB products produced for commercial use. Monsanto was in the business of producing, making, fabricating, constructing, designing, remanufacturing, reconditioning or refurbishing PCBs and PCB-containing products for placement into trade or commerce.

[22] Press Release, *EPA Provides Updated Guidance to Schools on PCB-containing Lighting Fixtures* (December 12, 2013), available at http://yosemite.epa.gov/opa/admpress.nsf/e51aa292bac25b0b85257359003d925f/2e548f3ed779c8a085257c3f006147ad!OpenDocument&Highlight=0,PCB#area (last accessed February 24, 2014).

63. Monsanto's PCB products including fluorescent light ballasts, caulks, and paints were manufactured for placement into trade or commerce.

64. Monsanto's PCB products may have formed component parts of or may have been subsequently incorporated into other products, equipment, or improvements to real property.

65. As a manufacturer, Monsanto owed a duty to all persons to whom PCBs and PCB-containing products might foreseeably harm, including Plaintiff, not to market any product which is unreasonably dangerous in design for its reasonably anticipated use.

66. By manufacturing and selling PCBs, Monsanto warranted that PCBs are merchantable, safe, and fit for ordinary purposes.

67. Monsanto breached that warranty as PCBs and PCB-containing products are unreasonably dangerous for their reasonably anticipated use in school buildings for the following reasons:

    a. PCB-containing products were used to construct commercial buildings and schools throughout Louisiana, including Plaintiff's;

    b. PCB readily migrates from the site of its original application and contaminates adjacent materials, dust, air, interior surfaces, exterior surfaces, and soil;

    c. PCB persists in the environment;

    d. PCB is invisible to the naked eye;

    e. Children and teachers may be exposed to PCB through inhalation, ingestion, and dermal contact.

    f. PCB is a known animal carcinogen and a possible human carcinogen and is associated with other serious health risks;

g. PCB exposure may be prevented only physical removal of the original PCB products and any secondary materials that have become contaminated;

h. Such remediation is extremely expensive to undertake, disrupts normal classroom activities, and may cause undue concern on the part of students, teachers, school employees, and parents.

68. Monsanto knew of the risks associated with PCBs and failed to use reasonable care in the design of its products.

69. Products containing PCBs pose greater dangers to school buildings than would be expected by ordinary persons such as Plaintiff, schoolchildren, teachers, and employees, and the general public.

70. There existed an alternative design for Monsanto's products that was capable of preventing the claimant's damage.

71. The risks posed by PCBs and PCB products outweigh the products' utility as building materials.

72. The likelihood that PCBs would contaminate Plaintiff's property and the gravity of that damage outweighed any burden on Monsanto to adopt an alternative design and outweighed the adverse effect, if any, of such alternative design on the utility of the product.

73. As a direct and proximate result of Monsanto's unreasonably dangerous design, manufacture, and sale of PCB-containing products, Plaintiff has suffered, and continues to suffer, property damage requiring investigation, remediation, and monitoring costs to be determined at trial.

74. Monsanto knew that it was substantially certain that its acts and omissions described above would threaten public health and cause extensive contamination of commercial and school properties. Monsanto committed each of the above described acts and omissions knowingly, willfully, and/or with fraud, oppression, or malice, and with conscious and/or reckless disregard for the health and safety of others, and for Plaintiff's property rights.

SECOND CAUSE OF ACTION

INADEQUATE WARNING UNDER LOUISIANA PRODUCTS LIABILITY ACT (La. R.S. § 9:2800.53)

75. Plaintiff realleges and reaffirms each and every allegation set forth in all preceding paragraphs as if fully restated in this count.

76. As a manufacturer of PCBs and PCB-containing products, Monsanto had a duty to provide adequate warnings to Plaintiff, the public, and public officials of the risks posed by PCBs and PCB-containing products.

77. PCBs and PCB-containing products are unreasonably dangerous for their reasonably anticipated use in school buildings for the following reasons:

a. PCB-containing products were used to construct commercial buildings and schools throughout Louisiana, including Plaintiff's;

b. PCB readily migrates from the site of its original application and contaminates adjacent materials, dust, air, interior surfaces, exterior surfaces, and soil;

c. PCB persists in the environment;

d. PCB is invisible to the naked eye;

e. Children and teachers may be exposed to PCB through inhalation, ingestion, and dermal contact;

f. PCB is a known animal carcinogen and a possible human carcinogen and is associated with other serious health risks;

g. PCB exposure may be prevented only physical removal of the original PCB products and any secondary materials that have become contaminated;

h. Such remediation is extremely expensive to undertake, disrupts normal classroom activities, and may cause undue concern on the part of students, teachers, school employees, and parents.

78. Monsanto knew of the risks associated with PCBs and failed to provide a warning that would lead an ordinary reasonable user or handler of a product to contemplate the dangers associated with PCB-containing products or an instruction that would have allowed Plaintiff to avoid the damage to its property.

79. Despite Monsanto's knowledge of the presence of PCB-containing products in commercial buildings and schools nationwide, Monsanto has not issued any warning, instruction, recall, or advice regarding PCB-containing products to schools, communities, parents, or governmental agencies.

80. Plaintiff would have heeded legally adequate warnings and would not have purchased products containing PCBs or would have taken steps to ensure that PCBs were treated differently to prevent potential exposure and contamination of the environment.

81. As a direct and proximate result of Monsanto's failure to warn, Plaintiff has suffered, and continues to suffer, property damage requiring investigation, remediation, and monitoring costs to be determined at trial.

PRAYER FOR RELIEF

Plaintiff prays for judgment against Defendants, jointly and severally, as follows:

1. Compensatory damages according to proof including, but not limited to:

    (a) the costs of investigating, sampling, testing, and assessing the extent of PCB contamination on Plaintiffs' properties;

    (b) the costs of removing PCBs and PCB-containing materials from Plaintiffs' properties;

    (c) the costs of informing parents and community members about the efforts to remove PCBs from schools;

2. Punitive damages;

3. Litigation costs and attorney's fees;

4. Pre-judgment and post-judgment interest; and

5. Any other and further relief as the Court deems just, proper, and equitable.

DEMAND FOR JURY TRIAL

Pursuant to Federal Rule of Civil Procedure 38, Plaintiff demands a jury trial.

Dated: May 19, 2015
